

**PRC develops MN Windshare projects in the upper Midwest.** Minnesota WindShare is an innovative program for local landowners and small businesses to own wind projects. MN Windshare was implemented in a recent PRC wind project in Lake Wilson, Minnesota.

#### **Benefits of Minnesota WindShare:**

- . Created community involvement and ownership.
- . Opportunity to own shares in a wind project that is developed by Project Resources Corporation.
- . Reduction in the multitude of risks associated with front-end development requirements.
- . Alleviate tax barriers to investment in wind projects experienced by many small investors.
- . Provided a healthy balance of investment and return opportunity to the local community with maximum project development, construction, and operation efficiency.

#### **Project Resources Corporation's Role:**

- . PRC developed the projects, including land, meteorology, permits, contracts for power sales, interconnection, turbine supply, construction and financing.
- . PRC planned several projects together using the same crews and equipment to capture economies of scale.

We believe that this program may help manage risk associated with wind development that has been a barrier for farmers and small businesses.
